Block Coding Decoding Auburn University

The VP9 encoder incorporates a larger prediction block size, up to 64×64 , and allows breakdown using a recursive decomposition all the way down to 4×4 blocks. It can thus achieve a high efficiency. VP9 supports 10 intra-prediction modes and four inter-prediction modes.

AN OVERVIEW OF EMERGING VIDEO CODING

When the blocks have finite length, to enable block-by-block channel estimation and symbol decoding, we need to remove ISI. As shown in Fig. 1, we achieve this by postprocessing by a matrix to obtain \hat{b}_i . There are two
