Combines photographs, line drawings, and exploded views with detailed overhaul procedures for specific units and components

Mine-protected and mine-resistant, ambush-protected (MRAP) vehicles are today standard in the US, most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan. The South African Army was already routinely using mine-protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly. A few years later, the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine-protected vehicles, including their ambulances and supply trucks. By then the mine-protected vehicles had also become effective for use in combat, rather than just protected transport, the Casspir being the chief example. More to the point, they saved countless soldiers and policemen from death or serious injury, and the basic concepts now live on in the various MRAP types in service today. The valuable lessons learned by the South Africans with their early designs of these combat-proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured and exported around the world. Surviving the Ride is a fascinating pictorial account featuring more than 120 of these unique South African-developed vehicles, spanning a forty-year period, with over 280 photographs, many of which are previously unpublished.

Chilton's Perennial Edition Service Manuals contain repair and maintenance information for all major systems that may not be available elsewhere. They include repair and overhaul procedures, thousands of illustrations, and troubleshooting. This 1978 Truck & Van Manual offers a wide range of repair information on domestic and imported Trucks and Vans from 1971 to 1978.

First published in 1987, The Compendium of Armaments and Military Hardware provides, within a single volume, the salient technical and operational details of the most important weapons. The complete range of hardware used in land, sea and air forces throughout the world at the time of publication is covered, from tanks to rocket systems, helicopters to cruise missiles, alongside full details of size, weight and operational range. The book's main strength lies in the detail it gives of armament and associated ammunition capabilities, and of the sensors and other electronics required for the weapons to be used

effectively. A key title amongst Routledge reference reissues, Christopher Chant's important work will be of great value to students and professionals requiring a comprehensive and accessible reference guide, as well as to weapons 'buffs'.

Regularly updated to ensure you stay informed of the latest developments throughout the year, Jane's Armour and Artillery is your essential battlefield reference.

The increased activity of Third World arms producers and exporters is a growing phenomenon in international security. Little systematic study has been made of the incentives, performance and prospects of Arab defence production. This book tackles this subject and examines the continuing debate about the pros and cons of indigenous production in the Arab case. It looks in detail at the theoretical and strategic context of Arab arms production, local defence production in the Arab countries and assesses Arab military industrialisation. Yezid Sayigh presents a comprehensive overview of the present reality of Arab defence industries, and concludes that Arab countries will be frustrated in their desire to emulate foreign military development until the right industrial environment is created.
